

Flow Diagram

Test Case Report:

Scenario	Expected Output	Actual Output
System handles incorrect inputs gracefully	User prompt apart from code or app creation are identified as invalid	✓ As expected
Coding Agent generates code	Code is generated based on input prompt	✓ As expected
Code Review Agent checks the generated code	If errors are found, the Coding Agent re-executes	✓ As expected
Code Review Agent finds issues and requests modifications	Coding Agent regenerates code and passes it back	✓ As expected
All agents execute sequentially and complete processing	Execution finishes successfully	✓ As expected
System maintains state across multiple executions	State persists correctly and is used in subsequent agent calls	✓ As expected
Exception handling	exception when previous agent failed to respond then exception handling stopped further Agent calls/LLM calls	✓ As expected
